

Company Overview

Six Sense Solutions LLC is a DevSecOps firm specializing in shift-left credential security infrastructure. We solve the entropy gap created when developers use insecure generation methods by providing a NIST-compliant, cryptographically secure credential generation API. One API call replaces months of internal security development and produces compliance documentation your auditors can verify immediately.

Core Competencies

- **Secure Credential Generation:** Replacing insecure `Math.random()` patterns with cryptographically secure, high-entropy credentials using Node.js `crypto.randomInt()` exclusively
- **Compliance-as-Code:** Automated NIST 800-63B and SOC2-ready audit documentation generated with every API response, including entropy bits and compliance profile
- **Shift-Left Security Infrastructure:** Native integration into developer workflows and CI/CD pipelines so security problems are solved at the point of credential creation, not after audits find them
- **Zero-Knowledge Architecture:** Credentials exist only in memory and in the HTTP response. Never stored, never logged, never retained

Differentiators

- **NIST 800-63B Native:** The only credential generation API specifically architected to enforce federal digital identity guidelines at the code level with documented proof per response
- **Empirical Research Foundation:** Product design informed by analysis of 50,000 real breached credentials, identifying failure patterns that compliance profiles are built to prevent
- **Sub-10ms Latency:** Designed for high-scale microservices and government cloud environments with reserved concurrency and dead letter queue architecture on AWS Lambda

Corporate Data

UEI: Pending SAM.gov Activation
CAGE Code: Pending Assignment
DUNS: Not Required (UEI transition)
Entity Type: Limited Liability Company
State of Incorporation: Maryland
Date Founded: March 12, 2025

NAICS Codes: 541519, 541512, 541690
PSC Codes: DJ01, DA01
SAM.gov Status: Registration Submitted, Pending Activation
Primary POC: hello@sixsensesolutions.net
Website: sixsensesolutions.net
API Endpoint: api.sixsensesolutions.net

Active Contracts / Past Performance:

No current federal contracts. Actively pursuing first government contract and SBIR Phase I application. Commercial API currently in beta with developer free tier available.
